

# MAY WE LIVE LONG

Phasing out the human species by voluntarily ceasing to breed will allow Earth's biosphere to return to good health. Crowded conditions and resource shortages will improve as we become less dense.

The best thing for Earth's biosphere is for humans to voluntarily cease reproducing. Most Volunteers subscribe to the philosophy embodied in the motto "May we live long and die out". Really, the only action required for becoming a VHEMT Volunteer or Supporter is not adding another human being to the population.

# AND DIE OUT
